

**Project Title:** Which Flight is Right for Me???

**Team Members:** Angel, Dimpel, T.J., Trevor

## **Proposal:**

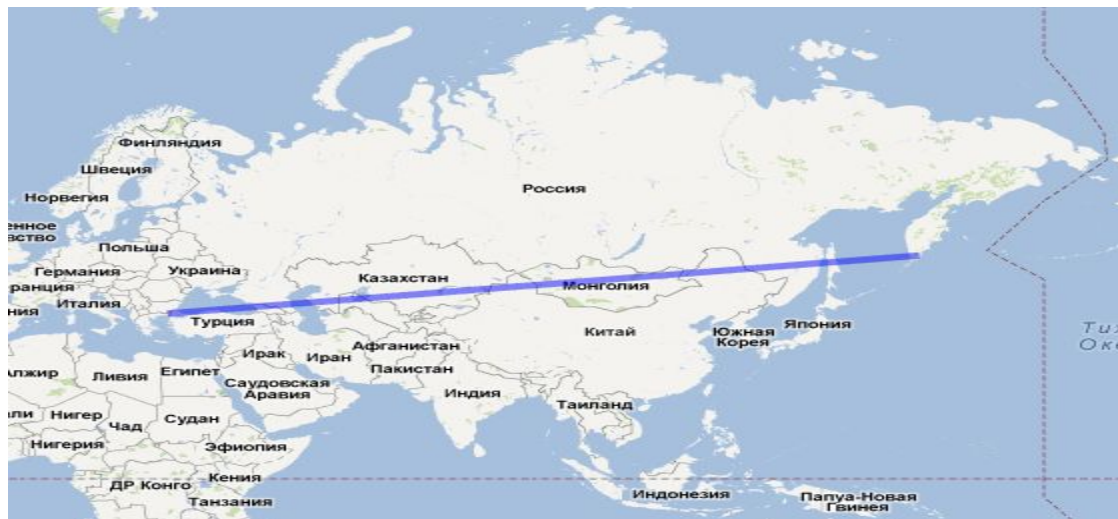

For our project we propose to create a hub where users will be able to obtain data on all flights available from any airport. The user will be able to pull a flight map and visually see their flightpath and compile various flight plans to compare and contrast times and distances and make informed decisions on which flight to take.

The following datasets will be used to complete:

<https://openflights.org/data.html>

<https://flightaware.com/commercial/flightxml/explorer/>

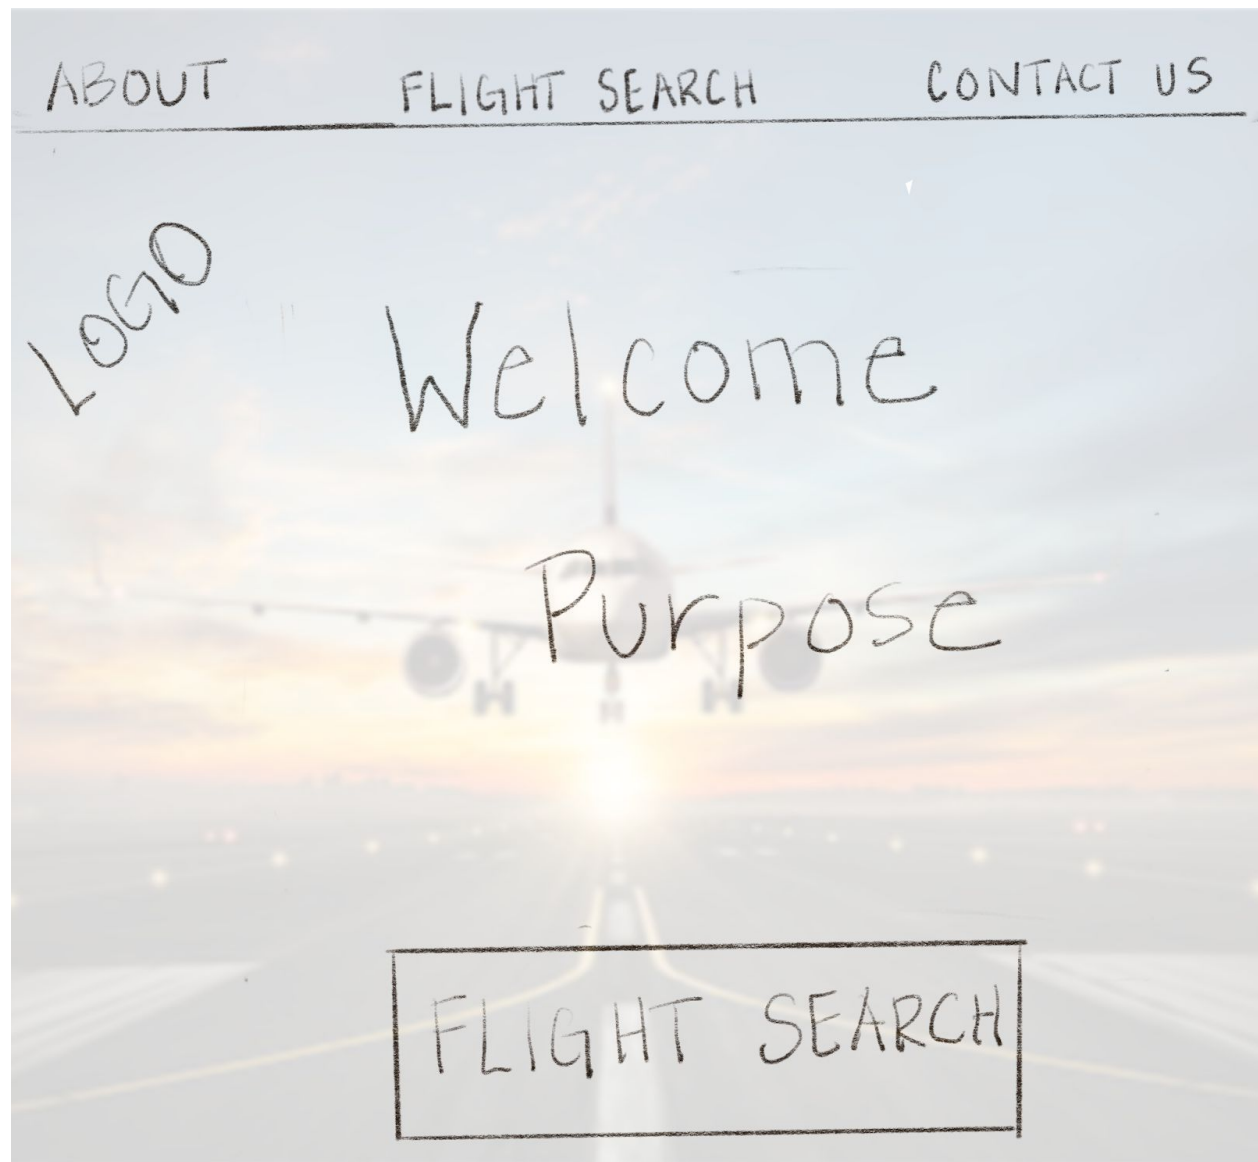

3-4 screenshots of relevant "inspiring" visualizations that frame your creative fodder :

A sketch of the final design:

The screenshot below will be the basic framework for the web and will consist of Welcome, Data, Flight Search, Flight Map, and Flight Performance Pages.

A link to the primary GitHub repository you'll be housing your work in:
